Going Concern

NOTE 3 – GOING CONCERN

The accompanying unaudited financial statements have been prepared assuming the Company will continue as a going concern, which contemplates, among other things, the realization of assets and satisfaction of liabilities in the normal course of business. The Company has had no revenue to date, has an accumulated deficit of \$4,927,047 as of November 30, 2017 and a net loss of \$1,929,678 for the nine months ended November 30, 2017. These factors raise substantial doubt about the Company's ability to continue as a going concern.

While the Company is attempting to increase operations and generate revenues, the Company's cash position may not be significant enough to support the Company's daily operations. The Company will continue to pursue additional equity and/or debt financing while managing cash flows from operations in an effort to provide funds to meet its obligations on a timely basis and to support future business development. There is no assurance that these efforts will be successful. Management believes that the actions presently being taken to further implement its business plan and generate additional revenues provide the opportunity for the Company to continue as a going concern. While the Company believes in the viability of its strategy to generate additional revenues and in its ability to raise the additional funds, there can be no assurances to that effect. The ability of the Company to continue as a going concern is dependent upon the Company's ability to further implement its business plans and generate additional revenues.

The financial statements do not include any adjustments to the amounts and classification of assets and liabilities that may result should the Company be unable to continue as a going concern.

These notes become convertible six months after the dates of agreement at a variable conversion price.

The Company evaluates embedded conversion features within convertible debt under ASC 815 “Derivatives and Hedging” to determine whether the embedded conversion feature(s) should be bifurcated from the host instrument and accounted for as a derivative at fair value with changes in fair value recorded in earnings. If the conversion feature does not require derivative treatment under ASC 815, the instrument is evaluated under ASC 470-20 “Debt with Conversion and Other Options” for consideration of any beneficial conversion features.

Convertible note holders have the option to convert the note plus accrued interest into shares of the Company’s common stock after six months, at a certain discount of the average of the lowest trading prices for the previous 20 days prior to the conversion date. The Company determined the embedded conversion feature as a derivative liability, and recorded at fair value as of November 30, 2017. For certain notes a \$500 to \$1,000 fee for costs associated with converting and clearing stock is added to the amount being converted with an adjustment to the conversion price.
